21 YEARS OF **ST** **KE**

It all started one summer in 1996 with two surfers from Venice, California. They wanted to surf the warm waters of the Venice Breakwater, but it was as flat as a lake. So like the many generations before them, they took to the streets with skateboards in search of hills to surf. As they dropped in on those asphalt waves, they were struck with how unlike surfing the experience was. They really missed the snap and drive of the modern surfboard, with that pivot from the tail that lets you pump a wave for speed, and cut back into the pocket. They were left only imagining the performance they wanted, unable to get that feeling with any skateboard on the market. After experimenting with many new designs and dozens of prototypes, Carver made its first production trucks. Today, after 21 years of continuous innovation, Carver is proud to continue to lead the revolution in surfskate and provide that stoke to a new generation of riders from around the globe.

 carver

31.5" ORIGIN

Carver started with the sea, and with the joy of sliding on the face of a wave. But we are also surrounded by an abundance of municipally made inclined surfaces, our 'waves by proxy', so we slide across all this cement on watery bearings, capturing a similar kind of potential energy. Surfing inspired Carver's innovative skateboard trucks, and now 21 years later we celebrate the true origin of our stoke; the wave and the process of its creation.

The graphic tells the story of the origin of waves, from the sun and winds to the moon and tides. Like our own history, we began as a small ripple, building into a groundswell over time. We chronicle this history in the new documentary '21 Years of Stoke', showing the beginnings of Carver and this nascent surfskate renaissance.

In those early days we rode everything on one board, long enough to handle a hill with skill, short enough to have fun pumping a driveway bank. Wide and short with a stretched-out wheelbase, this proportion always worked well, so we made this commemorative 21 year board just that. We made the quintessential surfskate shape by literally combining contours of a surfboard nose with a skateboard tail, both from a metaphoric and functional standpoint. Introducing the new Hyperspoon mold, our most advanced surfskate mold yet, this new mold features a deeper spooned nose and a more progressive skate tail. It's a more extreme version of our classic Spoon mold, continuing to push surfskate performance forward.

PRO MODELS

Pro riders are more than just big names, they help drive design and performance in very personal ways. Each Pro Model reflects the influence of the individual surfer's style, helping to not only drive technical performance, but inspire us to find new lines and ways to approach our own riding technique.

29.5" CONLOGUE SEA TIGER

A real charger, Courtney Conlogue is known as the Sea Tiger for her fierce and competitive approach to surfing. Her newest model is short and wide, perfect for a snappy surf trainer.

SPECS		TRUCKS

USA SURFING

Carver is a proud sponsor of the USA Surfing Team, the hottest group of groms to ever snap a turn. These young guns are the next generation of competitive surfers, and part of their success comes from their extensive training regimen. We made two boards for different training characteristics, each serving a specific style category.

PHOTO: McDaniel | USA SURFING

30.75" USA BOOSTER

Made for the USA Surf Team for the most progressive and talented groms in America, the Booster features a deep concave and nose kick for advanced surf training and skatepark riding.

CHANNEL ISLANDS SURFBOARDS

Channel Islands is arguably one of the most influential surfboard brands in the world, so when they approached us for a collaboration, we were honored. Al Merrick, founder and master board designer, has designed some of the most classic models in board design history, and he wanted us to make pairings for two of them, the Flyer and the Pod Mod.

29.25" CI POD MOD

Developed with Channel Islands around their classic Pod Mod, this groveler shortboard is meant to be ridden wider and shorter for progressive everyday performance.

SPECS

SURFSKATES

The style that started it all, surfskate is the genesis of skateboarding, with boards like the Sidewalk Surfer and the Supa Surfa introducing skateboards to the world. Surfskate was all but forgotten as street skate grew in prominence. Carver took the seeds of the style and created real technology that took the concept to a new level, reflecting the modern Thruster generation and all the advances in design and performance since the Shortboard Revolution.

30" PROTEUS

The Proteus features a boxy template that reduces swing weight, while preserving a wide nose for full carving control. The skateboard half of our Proteus surf/skate pairing.

SPECS		TRUCKS	
W	9 7/8"	CX	RAW
WB	17"	C7	RAW

31" ORACLE

Featuring a classic thumbtail template, it's wide where it counts and pulled in where it can be to give this board a balance of maneuverability on the flats and speed on the hills.

BUREO

When we met the founders of Bureo, we fell in love with their mission for saving the oceans by creating the world's first commercial fishing net recycling program, and providing a way to keep discarded nets from harming marine life and polluting our oceans. Working together to make the common plastic skateboard a truly functional surf performance machine, Carver helped design a wider, longer and stronger board, combined it with our C5 Truck Set and made it a long-lasting, high performance, waterproof surfskate that supports a greener future for generations to come.

27" BUREO AHI

Made from recycled fishing net nylon, this functional mini features concave for less flex and better control, a small nose kick and full tail kick for true skate performance.

STREET SURF

For years we've been blending surf and skate, but as surfskate progresses and riders incorporate more traditional skateboard tricks into their style, we set out to design equipment that supports this progression. Lower, narrower trucks, new school double kick deck mold and smaller wheels all facilitate tricks while still supporting grippy, snappy carving.

32" IMPALA

Inspired by the classic 1970s lowrider favorite, the thinner 8 1/2" template keeps it light, with a bit more room at the nose for wide stance carving.

SPECS

W	8 1/2"	C5	RAW
WB	14 1/2"	C4	RAW

TRUCKS

32.25" BEL AIR

Based on the 1950s era hot rod model, the wider 8 7/8" template recalls the archetype of pool board mixed with a street board.

SURFBOARDS

Carver has always been about surfing. It was the direct inspiration for the performance of our skateboards, as we literally went surfing in the morning and skating in the afternoons to compare performance to find the common ground. Now, after all these years of riding our own skateboards we realized that we wanted something more from our surfboards too, ironically something a bit more like our skateboards. So we created the Proteus, a surfboard that feels more skatey than a standard surfboard, and we paired it with a matching surfskate so you can smoothly transition between the ocean and the asphalt with a continuous performance experience.

PHOTO | Peu Fernandes

PROTEUS

Built for having fun in a wide range of conditions, the straighter rail is fast down the line while the clipped nose reduces swing weight and shortens the turn arc. With a nearly symmetrical template, the Proteus combines the easy paddle of a bigger board with the snappy turning of a stubby sled. The tail block adds extra lift without being too buoyant, giving you more control when the bigger sets roll in. A single concave entry flows into a forward vee through the middle into a panel vee through the tail, for fast pumping and easy rail-to-rail transitions. Featuring a versatile 5-fin Futures setup manufactured by premier California ecoboard manufacturer Earth Technologies, made with Marko's EPS Envirofoam and Entropy's Super Sap, it's certified by Sustainable Surf and won "Best in Show" at The Boardroom Show 2015. Matching it is our Proteus surfskate for that same short-and-snappy performance on land. Fins sold separately.

TRUCK SYSTEMS

After extensive experimentation on the now-legendary coastal hills around Venice and Santa Monica, Carver successfully created the original patented dual-axis truck, a revolution in skateboard design. Over the years this model has evolved into the C7, the most progressive and versatile surfskate trucks ever made. As the style of surfskate continued to evolve worldwide, Carver recognized that there was a growing need for a simpler, lighter surfskate truck as well, so we went back into the workshop and created the CX. The unique patented geometry a nd innovative machined pivot pin is anything but standard, once again creating better performance through innovation.

CX SYSTEM

This is Carver's hybrid surf and skate truck. On the one hand it's a lightweight standard RKP (Reverse King Pin) hanger and base, on the other it has a patented geometry that squeezes every bit of turn and pump from its simple design. That means that you can pump this truck like a C7, but it lands airs and rides fakie with more stability as well. This opens up aerial maneuvers, and keys in with the latest progression of airs in surfing. This original Carver design is quickly becoming the most popular surfskate truck in the world.

C7 SYSTEM

This is the signature truck that started it all. Still the smoothest turning, fastest pumping surf truck ever, it's at the leading edge of true surfskate performance. The patented second axis of this front truck not only increases the turning radius of your carve, but lets you snap the nose and pivot your turns off the tail. This dynamic creates thrust and drives you forward with increasing speed. The striking similarity to surfing performance has made the C7 the choice for surf training by pros and ams alike.

C5 SYSTEM

The history of skateboarding is the story of inventiveness, of tricks and flow over an unyielding landscape. The truly modern surfskate needs to incorporate this history of progression, and provide a set-up that can ollie and flip as easily as it can carve and pump. And so the C5 System (C5 front, C4 rear) is shorter and narrower, lowering the center of gravity and giving it more pop. You get higher ollies and better control, while the narrower hanger keeps it light and maneuverable. This is the next generation of surfskate, blending tricks and flow into a complex, creative expression.

TRUCK SETS/KITS

For the rider who wants to make their own custom surfskate, we offer our trucks in two packages, the Set or the Kit. The Set comes with a pair with risers and hardware, for those who want a fully custom set-up with their own components. The Kit is a complete set-up including everything you'll need but the wood, from wheels and bearings to hardware and the tool that can put it all together.

| (8) | 1 1/4" MOUNTING BOLTS | (4) | WHEELS + BEARINGS |

WHEELS

The surfskate revolution in truck design is really only half the story. Innovation in wheel design is where the proverbial 'rubber meets the road', and Carver has been equally dedicated to designing and making premium surfskate wheels that match the high performance characteristics of their trucks through their Roundhouse wheel brand.

From the fast-rolling Mag, and the ultra-grippy Concave, to our latest hybrid Park wheel, we make sure that whatever your terrain or style of riding you want to take on, we've got what you covered.

69MM CONCAVE

A super-grip wheel design, the concave lips compress with weight, hugging the ground like claws. The most you'll ever lean into a turn with confidence!

(4) 78a ROUNDHOUSE WHEELS

70MM MAG

A grippy, yet fast rolling wheel with a thin outer lip and solid core profile creates the perfect balance of easy pushing and sticky carving. A very versatile cruiser.

(4) 78a ROUNDHOUSE WHEELS

58MM PARK

Soft wheels bog down on smooth surfaces, so this one is meant to keep speed and grip at the skate park. Rounded profile for coping tricks, hollow lip for grip.

(4) 95a ROUNDHOUSE WHEELS

ECOTHANE

Ecothane is our unique formulation that combines a natural soy-based urethane with Carver's premium Roundhouse formula. Every formulation has its own properties, and as we began experimenting with this blend, we found that we got the same fast roll and rebound speed, but got a little more grip, too. We love to reduce our footprint and live more consciously whenever possible, but we're a skateboard company and performance is king, so we're stoked to be able to hit both goals with this model. A faster wheel with superior grip properties that helps the planet, what more is there to talk about?

65MM ECOTHANE MAG

Grippy and fast rolling just like the 70mm, but lighter and more compact. Hardened to an 81a to keep a fast roll with the smaller diameter.

(4) 81a ROUNDHOUSE ECOTHANE WHEELS

69MM ECOTHANE CONCAVE

The Concave profile is already one of the grippiest wheels we've ever ridden, and now it's even grippier. And the harder 81a durometer speeds things up, making this the most perfect surfskate wheel we've ever ridden.

(4) 81a ROUNDHOUSE ECOTHANE WHEELS

70MM ECOTHANE MAG

A grippy, yet fast rolling wheel with a thin outer lip and solid core profile creates the perfect balance of easy pushing and sticky carving, now even faster and stickier in the 81a Ecothane.

(4) 81a ROUNDHOUSE ECOTHANE WHEELS

ACCESSORIES

We make things that last, but even the best bearings get old and need replacement. Or maybe you want to try a different set of bushings to get the exact feel you're after. We carry original equipment replacement parts for those who ride Carver trucks.

BEARINGS

Carver Abec 7 Built-Ins are the ultimate bearing for speed, performance, and durability. Built with hardened Rockwell C-65 grade steel and precision grooved inner races, these bearings provide an ultra smooth ride with low rolling resistance, less overall friction, and a longer bearing life. The built-in spacers and speed rings allow for an easy and hassle free installation creating a solid and perfectly centered set up.

- (8)** (SET) BUILT-IN SPACERS
- (12)** (CASE) INDIVIDUAL SETS

BUSHINGS

Bushing performance is key to getting the most out of a surfskate. High rebound is essential so it gives energy back with each pump. Firm but resilient flex means you can push with ease but still get that free rail to rail surf feel. Carver bushings are hand-cast with premium urethane in several shapes and hardnesses so you can pick the kind of performance you want, and customize your ride.

- (4)** PERFORMANCE BUSHINGS
- (2)** PIVOT CUPS

RISERS

Soft, lightweight hollow risers help dampen your ride and lift the truck to prevent wheelbite with larger wheels. Custom C7 shape fully supports longer baseplate.

- (2)** RISERS
- (8)** 1 3/4" HARDWARE

ACCESSORIES

PIPEWRENCH

This universal pocket shop measures in at under 2½" in length, so it's easy to bring along on a session for on-the-fly adjusting. Made of tool grade stainless steel, it won't rust, break or wear out, guaranteed. The Allen key snaps on with a powerful neodymium magnet.

(1) STAINLESS STEEL WRENCH

STICKER PACK

Newly completed logo update featured in this set of custom die-cut, screen printed vinyl stickers.

(25) ASSORTED CARVER STICKERS

HARDWARE

We're surfers, and so we always end up with a board at the beach, pumped around the parking lot before a paddle. Marine grade stainless steel hardware never rusts, so you don't have to worry about a little salt.

(8) 1 1/4" STAINLESS STEEL HARDWARE

TRITON BY CARVER

Triton is for the younger rider looking for a smaller board to rip. From its bright boardshort-inspired graphics to its die-cut deck grip, everything is pure surf. Proportioned to enable the same power moves as full-sized surfskates, this lineup answers the need for an easy carving mini for the frothing grom. Whether for just pushing around town or advanced kinesthetic surf training, these sturdy 'little big boards' do it all.

Triton's high performance comes from its precision-pivot Carver trucks, fast and grippy Roundhouse 61MM wheels and 7 ply hard rock maple Triton deck, each the result of over 20 years of surfskate innovation and experience. Each board comes with the commitment to premium quality and durability that makes Triton the perfect introduction to surfskate for any age.

26" ARGON

As thin as air, the Argon is the smallest board in the line, proportioned to give the lightest rider the full surfskate experience. With softer bushings and the lower C5 truck set, it's responsive and easy to carve.

SPECS		TRUCKS	
W	8 3/4"	C5	RAW
WB	14 3/8"		

27" HYDRON

A minnow-sized fish, the Hydron features Carver's softer bushings and lower trucks on a grom-sized deck for the full surf and skate experience at any age.
