Geoflex is a material that has a different elastic range than that of our Geoprene. We used this material to create the new entry the Dante has with the Butterfly-collar and the yoke pull-over. The idea was to develop a front-entry that was easy to get in-and-out of for almost everyone without taking water into the suit.

The 3/2 Dante Fullsuit aka the Ichiban. The Dante is the most flexible suit that we have ever made. Hence, it perfectly suits people that don't like front zips and / or back zips and it's specifically engineered for customers that don't like putting a wetsuit on -- or taking one off.

**SATIN SEAL TAPE:** A durable yet flexible SCS tape that provides extra seam durability that is soft and comfortable to your skin.

**BUTTERFLY COLLAR ENTRY:** A new system that allows for easy-in and easy-out while eliminating water entry with its adjustable high neck line.
